

: *What are 12 agile principles?*

The following 12 Principles are based on the Agile Manifesto.

1. **Satisfy the Customer.** Our highest priority is to satisfy the customer through early and continuous delivery of valuable software.
2. **Welcome Change.** Welcome changing requirements, even late in development. Agile processes harness change for the customer's competitive advantage.
3. **Deliver Frequently.** Deliver working software frequently, from a couple of weeks to a couple of months, with a preference to the shorter timescale.
4. **Work Together.** Business people and developers must work together daily throughout the project.
5. **Build projects around motivated individuals.** Give them the environment and support they need, and trust them to get the job done.
6. **Find Face-To-Face Time.** The most efficient and effective method of conveying information to and within a development team is face-to-face conversation. If the teams are not co-located, every effort must be made to communicate often and to increase the use of technical communication techniques.
7. **Working software is the primary measure of progress.**
8. **Sustainable Development.** Agile processes promote sustainable development. The sponsors, developers, and users should be able to maintain a constant pace indefinitely.
9. **Excellence.** Continuous attention to technical excellence and good design enhances agility.
10. **Keep It Simple.** Simplicity – the art of maximizing the amount of work not done – is essential.

: *What are 12 agile principles?*

Eliminate functionality that does not create value.

11. Self-organizing teams. The best architectures, requirements, and designs emerge from self-organizing teams.

12. Reflect to Increase Effectiveness. At regular intervals, the team reflects on how to become more effective, then tunes and adjusts its behavior accordingly.
